Hi Tom,

Make sure the SW2 switch is set with 1 & 2 off and 3 & 4 on. Not sure if it is important, but all SW1 switches are off.

Make sure that your USB blaster has pin 1 next to the HDMI connector.

You should only have to add one device, the MAX10. Make sure it is "10M50DAF484ES".

Hope that this helps.

I can send you a QSF file with all of the pins defined the way they are listed in my .v file. You can use that as a starter if you like.
